

Amperex Bugle Boy

When it comes to selecting premium audio tubes for your amplifier, accept no less than the best—Amperex Bugle Boy!

Amperex Bugle Boy tubes are burned in under full load with all voltages applied for 24 hours before being tested for noise & microphonics. The aging racks used are from the original Amperex production line built in Holland decades ago.

Complete test results are supplied with each tube, including plate current, screen current, grid one current, filament current, and total harmonic distortion (THD). The THD measurement is performed using one of the finest spectrum analyzers available—the Hewlett Packard 3561A. Matching in pairs, quartets & octets is available for all tube types.

Special test requirements? Not a problem. For a slight additional charge we will test and match to your specified operating conditions.

So if you haven't dealt with a source capable of meeting your demands, call us at **1-800-TUBE USA** or **630-208-2200** today for information on additional products and the worldwide locations nearest to you. You'll like what you hear!

Types available:
